

A series of orange silhouettes of people in business attire, standing in a line and facing right. The silhouettes vary in height and are positioned on a white rectangular base.

We are pleased to announce that as of 1st January 2008 Klaus Hiltrop will join Digatron Aachen as hard- and software engineer.

His duties will be the assistance in conception of systems, modules and circuits in the field of control technology. He will develop, test and modify hard- and software modules for our test systems.

After a training period of approx. of 6 months in Aachen he will move to China. There he will be in charge of the position as Director of Engineering.

New Face

Klaus Hiltrop Hard- and Software Engineer

Klaus Hiltrop was born in Essen on 4th February 1959.

After reaching his high school diploma (A-Level) he completed a traineeship at Siemens. Afterwards he studied electro technology at the Technical University in Aachen for a period of 4 semesters.

His professional development started at SMC-Technology where he was involved with an R & D project.

Thereafter he changed to Wilke Technology, where he could collect well founded experiences in the field of hard- and software development and the corresponding commissioning. His main project was the so called „Basic-Tiger“ , a series of well known microcontroller-modules, programmable in multi-tasking-basic. This controller is known as an industry standard.

Recently he has been working at Gesytec, where he gained experience in the area of Boot Code and BIOS programming for embedded PC's.

Klaus Hiltrop likes travelling: He has previous experience of living and travelling in Asia and has also been to Qingdao. He speaks English, French, Netherlands, Portuguese and Spanish. Besides all this he has a basic knowledge in speaking Chinese.
